

Office versions (MSI or C2R) and Project / Visio versions (MSI or C2R) that can be installed together

Error message: we're sorry, Office Click to Run installer encountered a problem because you have these Windows Installer based Office programs installed on your computer.

The error message 'we're sorry, Office Click to Run installer encountered a problem because you have these Windows Installer based Office programs installed on your computer.' has already been discussed in my blog article '[Click to Run and Windows Installer editions do not get along](#)'. If you virtualize Visio and / or Project, then these 2 applications can coexist on the same computer. There are two disadvantages:

1. it is not supported by Microsoft
2. If you try to save a Visio drawing on OneDrive, you will think the drawing has been saved, but actually it is not.

In the scheme below you will find the supported combinations of

Office and Visio / Project that can be installed on the same computer, without the use of virtualization techniques:

			Office versions			
			C2R		MSI	
			2016 release of Office 365 ProPlus or Business	2013 release of Office 365 ProPlus or Business	Office Professional Plus or Standard 2016	Office Professional Plus or Standard 2013
Project / Visio Version	C2R	2016 release of Pro for Office 365	Yes	No	No	Yes
		2013 release of Pro for Office 365	No	Yes	Yes	No
	MSI	Professional or Standard 2016	No	Yes	Yes	Yes
		Professional or Standard 2013	Yes	No	Yes	Yes

More information can be found [here](#).
